This is a survey of the science and practice of web crawling. While at first glance web crawling may appear to be merely an application of breadth-first-search, the truth is that there are many challenges ranging from systems concerns such as managing very large data structures, to theoretical questions such as how often to revisit evolving content sources. This survey outlines the fundamental challenges and describes the state-of-the-art models and solutions. It also highlights avenues for future work.

Provides fundamental knowledge every plant scientist and student of plant pathology should know, including important historical events that gave birth to the field as well as its recent advances. Illustrates the symptoms caused by bacteria in a way that facilitates comprehension of the many different types of plant diseases that they cause. Each symptom type is presented with a detailed example of a causal agent and its characteristics, diagnostics, and mechanisms of virulence and pathogenicity. Also includes an extended discussion on the molecular mechanisms of virulence and a chapter on epidemiology and disease control.

An overview of recent efforts in the machine learning community to deal with dataset and covariate shift, which occurs when test and training inputs and outputs have different distributions. Dataset shift is a common problem in predictive modeling that occurs when the joint distribution of inputs and outputs differs between training and test stages. Covariate shift, a particular case of dataset shift, occurs when only the input distribution changes. Dataset shift is present in most practical applications, for reasons ranging from the bias introduced by experimental design to the irreproducibility of the testing conditions at training time. (An example is -email spam filtering, which may fail to recognize spam that differs in form from the spam the automatic filter has been built on.) Despite this, and despite the attention given to the apparently similar problems of semi-supervised learning and active learning, dataset shift has received relatively little attention in the machine learning community until recently. This volume offers an overview of current efforts to deal with dataset and covariate shift. The chapters offer a mathematical and philosophical introduction to the

problem, place dataset shift in relationship to transfer learning, transduction, local learning, active learning, and semi-supervised learning, provide theoretical views of dataset and covariate shift (including decision theoretic and Bayesian perspectives), and present algorithms for covariate shift. Since 1958 the Maritime Administration has continuously conducted instructions in use of collision avoidance radar for qualified U.S. seafaring personnel and representatives of interested Federal and State Agencies. Beginning in 1963, to facilitate the expansion of training capabilities and at the same time to provide the most modern techniques in training methods, radar simulators were installed in Maritime Administration's three region schools. It soon became apparent that to properly instruct the trainees, even with the advanced equipment, a standardize up-to-date instruction manual was needed. The first manual was later revised to serve both as a classroom textbook and as an onboard reference handbook. This newly updated manual, the fourth revision, in keeping with Maritime Administration policy, has been restructured to include improved and more effective methods of plotting techniques for use in Ocean, Great Lakes, Coastwise and Inland Waters navigation. How the increasing reliance on metrics to evaluate scholarly publications has produced new forms of academic fraud and misconduct. The traditional academic imperative to “publish or perish” is increasingly coupled with the newer necessity of “impact or perish”—the requirement that a publication have “impact,” as measured by a variety of metrics, including citations, views, and downloads. *Gaming the Metrics* examines how the increasing reliance on metrics to evaluate scholarly publications has produced radically new forms of academic fraud and misconduct. The contributors show that the metrics-based “audit culture” has changed the ecology of research, fostering the gaming and manipulation of quantitative indicators, which lead to the invention of such novel forms of misconduct as citation rings and variously rigged peer reviews. The chapters, written by both scholars and those in the trenches of academic publication, provide a map of academic fraud and misconduct today. They consider such topics as the shortcomings of metrics, the gaming of impact factors, the emergence of so-called predatory journals, the “salami slicing” of scientific findings, the rigging of global university rankings, and the creation of new watchdogs and forensic practices.

The signature creation of cartoonist Roger Langridge, Fred the Clown is the thinking man's idiot. Fred has an eye for the ladies, as well as several other organs, but the only part of themselves they're willing to share with him is a carefully placed kneecap. Fred the Clown's misadventures are a curious balance of bleakness and joyful absurdism; the universe may dump on Fred from a great height, but he never gives up. More often than not, they involve the pursuit of a lady—any lady will do, it seems, but bearded ladies are at the top of the list. Disappointment seems inevitable, and it usually is; yet, almost despite himself, Langridge will occasionally give Fred a happy ending out of nowhere... p.p1 {margin: 0.0px 0.0px 0.0px 0.0px; font: 13.9px Arial; color: #424242}

Googled is candid, authoritative and based on extensive research, including in-house at Google HQ where Ken Auletta had unprecedented access. He conducted over 150 interviews at Google with the company's founders and executives and also interviewed those in the media who are struggling to keep their heads above water. Crucially, Googled is not just a history or reportage: it's forward-looking. Auletta reveals how the media industry is being disrupted and redefined and shows how and why the worlds of 'new' and 'old' media often communicate as if residents of different planets. Googled is already being hailed as the definitive work on Google and is a crucial roadmap to how media business may be done in the future.

In natural waters, trace elements—especially metals—may be present in different physicochemical forms varying in size, charge, and density. Trace Elements in Natural Waters comprehensively covers the microchemical processes occurring in the water phase. The book describes geological and biological interactions involving supply or removal of trace elements in the water phase. Analytical aspects are included, since sampling, pre-analysis handling, and methods of analysis strongly influence the quality of data. Different natural water systems are reviewed with respect to sources, concentration levels, and physicochemical forms of trace elements. Also, important fields of future research are investigated.

Writer, physician, philosopher and lexicographer, Émile Littré was commissioned by Hachette in 1841 to compile a new dictionary of the French language. The work, finally started in 1845, took nearly 30 years to complete, during which period France went through a great deal of turbulence. Littré wrote this companion volume, a remarkable novella-length essay, *Comment j'ai fait mon dictionnaire* ('How I Made My Dictionary'), in 1880, which was translated and published for the first time in English in 1998 by a former Indian diplomat. The translation, now brought back into print by Hachette India, has been commended by *Dictionaries*, a journal of the Dictionary Society of North America, for being 'accurate and conveying the

original's lively, intense effect. This book is a vital philological addition to the study of words and language, and an insight into the remarkable men who made such study possible by embarking on epic ventures of the literary kind.

There are more coral species in deep, cold-waters than in tropical coral reefs. This broad-ranging treatment is the first to synthesise current understanding of all types of cold-water coral, covering their ecology, biology, palaeontology and geology. Beginning with a history of research in the field, the authors describe the approaches needed to study corals in the deep sea. They consider coral habitats created by stony scleractinian as well as octocoral species. The importance of corals as long-lived geological structures and palaeoclimate archives is discussed, in addition to ways in which they can be conserved. Topic boxes explain unfamiliar concepts, and case studies summarise significant studies, coral habitats or particular conservation measures. Written for professionals and students of marine science, this text is enhanced by an extensive glossary, online resources, and a unique collection of colour photographs and illustrations of corals and the habitats they form.

Life, Stories, and Poems of John Brougham ...

In *Mary, Woman and Mother* Fr. Francis Moloney studies the New Testament's presentation of Mary's person and role. After indicating the limits and strengths of a biblical study of Mary, he examines the Marian texts from the Letter of Paul to the Galatians, the Gospels of Mark, Matthew, and Luke, the Acts of the Apostles, and the Gospel of John. She is above all a woman and a mother. This book shows that in recognizing Mary as God's place of encounter with all that is most beautiful among women and men, we will gain access to the womanly, maternal face of God.

A cosy Dandy Gilver mystery set in 1930s Scotland. For fans of PG Wodehouse, Dorothy L Sayers and Agatha Christie. On the rain-drenched, wave-lashed, wind-battered Banffshire coast, tiny fishing villages perch on ledges which would make a seagull think twice and crumbly mansions cling to crumblier cliff tops while, out in the bay, the herring drifters brave the storms to catch their silver darlings. It's nowhere for a child of gentle Northamptonshire to spend Christmas. But when odd things start to turn up in barrels of fish - with a strong whiff of murder most foul - that's exactly where Dandy Gilver finds herself. Enlisted to investigate, she and her trusty cohort Alec Osborne are soon swept up in the fisherfolk's wedding season as well as the mystery. Between age-old traditions and brand-new horrors, Dandy must think the unthinkable to solve her grisliest case yet. Catriona McPherson's latest novel in the series, *Dandy Gilver and a Spot of Toil and Trouble* is now available for pre-order.

The techniques of metal colouring, bronzing and patination are assuming a new importance in contemporary fine metalwork and design. Richard Hughes and Michael Rowe have assembled and tested the recipes included in this book, which is the most comprehensive work on the subject currently available, an essential reference and sourcebook for practitioners and all those involved in sculpture, architecture, design and the decorative arts. It brings together hundreds of recipes and treatments previously scattered in a variety of old books and technical papers, and provides the artist-craftsman with a very wide range of coloured finishes. Each of the recipes included has been tested and evaluated by the authors, and the practical procedures involved are clearly explained. In addition, they have devised techniques that considerably broaden the range of surface finishes that can be obtained. The metals covered are bronze and yellow brass in cast form; copper, gilding metal, yellow brass and silver in sheet form; and silver-plate and copper-plate. The book is easy to use; all the recipes are classified according to the colour and surface finish they produce on each metal. Colour illustrations show over 200 examples of finishes as test pieces of metal, or as cast or spun bowls. Notes accompanying each recipe draw attention to potentially dangerous processes or chemicals, and to the correct safety precautions. Safety procedures in general are covered thoroughly in a separate section. Detailed information on practical workshop methods and how to avoid any problems that may be encountered is given in sections on the various techniques. A glossary of archaic chemical terms and their modern equivalents is included. An historical introduction outlines the various metalworking traditions with which the use of colouring techniques is associated. An extensive bibliography gives over 400 references of historical, practical and theoretical interest.
