Forensic Analysis of Impression Evidence

The authors deal not only with finding and using scientific evidence, but also with implementation and evaluation of interventions that generate new evidence on effectiveness. Each chapter covers the basic issues

and provides multiple examples to illustrate important concepts.

Evidence

This casebook is designed to engage students with a wide range of learning styles and to explore evidence law from the eyes of an advocate. Through a problem-centered approach that focuses on the gray areas of the Federal Rules of Evidence, students will develop a heightened sensitivity to factual and legal arguments that govern the admissibility of evidence. This focus on legal argumentation allows students to actively cultivate an understanding of the legal doctrine behind the Federal Rules of Evidence as well as the role that facts and narrative play in legal reasoning. Exercises, visual aids, and video supplements in each chapter allow students to assess their learning. A single thread that runs through the book is video and case materials surrounding a North Carolina murder trial, *State v. Peterson*. The trial was memorialized in an award-winning documentary, *The Staircase*, directed by Jean-Xavier de Lestrade. The casebook follows the trial, including the strategies undertaken by counsel and the battles over evidentiary issues that shaped both sides' narratives in the trial. Video excerpts will be provided to the instructor to add a further dimension to student learning and to reach a broad array of learning styles. The new second edition has incorporated pedagogical innovations (including new flowcharts to enhance understanding), updated the law based on amendments to the Federal Rules of Evidence and recent Supreme Court cases, and developed new problems to explore the nuances in the law. The second edition is designed to make it easy for professors to incorporate best practices into their classes in order to train students to be self-directed, successful learners. This book is part of the Context and Practice Series, edited by Michael Hunter Schwartz, Professor of Law and Dean of the McGeorge School of Law, University of the Pacific. A brief update to the Federal Rules of Evidence as contained in the book is available [here](#).

Evidence

This book explains the correct logical approach to analysis of forensic scientific evidence. The focus is on general methods of analysis applicable to all forms of evidence. It starts by explaining the general principles and then applies them to issues in DNA and other important forms of scientific evidence as examples. Like the first edition, the book analyses real legal cases and judgments rather than hypothetical examples and shows how the problems perceived in those cases would have been solved by a correct logical approach. The book is written to be understood both by forensic scientists preparing their evidence and by lawyers and judges who have to deal with it. The analysis is tied back both to basic scientific principles and to the principles of the law of evidence. This book will also be essential reading for law students taking evidence or forensic science papers and science students studying the application of their scientific specialisation to forensic questions.

Statistics and the Evaluation of Evidence for Forensic Scientists

Focusing on issues raised at Interpol's 14th Forensic Science Symposium, this volume offers a complete overview and analysis of the scientific and legal aspects of each of the forensic disciplines. Understanding Evidence-Based Rheumatology

What do we mean by ‘visual evidence’? How should we interpret visual texts, and what can they tell us? Why is ‘visual literacy’ so important and what benefits does it offer? Visual evidence encompasses a diverse range of media, from painting, cartoons and photography, to film, television and documentary. The central argument of this book is that visual evidence is a key to understanding both history and the present day and should not be relegated to a supporting role as merely illustrating the written word. The book shows students, scholars and researchers how to read the visual media to elicit meaning. As primary sources, visual texts can be studied not only for what is directly depicted in the painting or film but also for what it tells us about the people, cultures and societies that made them. Each chapter features fascinating case studies and examples which situate theory in real life. A major appeal of the book is the wealth of illustrations and photographs of visual texts which are included throughout. The authors make detailed reference to these examples to illustrate the theory surrounding visual evidence. An intriguing case study of an unknown girl’s photo album is just one of many examples offered, showing how we can analyze and learn from the visual text. This comprehensive and insightful edited collection brings together international media and cultural theorists, historians and art historians to demonstrate the value of visual evidence not only to media and cultural studies, but also to history, the general humanities and the social sciences.

Examples & Explanations for California Evidence
