Economic Development Strategic Planning Introduction

Strategic Planning for Economic Development

Regional economic development has attracted the interest of economists, geographers, planners and regional scientists for a long time. And, of course, it is a field that has developed a large practitioner cohort in government and business agencies from the national down to the state and local levels. In planning for cities and regions, both large and small, economic development issues now tend to be integrated into strategic planning processes. For at least the last 50 years, scholars from various disciplines have theorised about the nature of regional economic development, developing a range of models seeking to explain the process of regional economic development, and why it is that regions vary so much in their economic structure and performance and how these aspects of a region can change dramatically over time. Regional scientists in particular have developed a comprehensive tool-kit of methodologies to measure and monitor regional economic characteristics such as industry sectors, employment, income, value of production, investment, and the like, using both quantitative and qualitative methods of analysis, and focusing on both static and dynamic analysis. The 'father of regional science', Walter Isard, was the first to put together a comprehensive volume on techniques of regional analysis (Isard 1960), and since then a huge literature has emerged, including the many titles in the series published by Springer in which this book is published.

Promoting Local Economic Development Through Strategic Planning: Toolkit

This book offers insights into the process and the practice of local economic development. Bridging the gap between theory and practice it demonstrates the relevance of theory to inform local strategic planning in the context of widespread disparities in regional economic performance. The book summarizes the core theories of economic development, applies each of these to professional practice, and provides detailed commentary on them. This updated second edition includes more recent contributions - regional innovation, agglomeration and dynamic theories – and presents the major ideas that inform economic development strategic planning, particularly in the United States and Canada. The text offers theoretical insights that help explain why some regions thrive while others languish and why metropolitan economies often rise and fall over time. Without theory, economic developers can only do what is politically feasible. This text, however,

provides them with a logical tool for thinking about development and establishing an independent basis from which to build the local consensus needed for evidence-based action undertaken in the public interest. Offering valuable perspectives on both the process and the practice of local and regional economic development, this book will be useful for both current and future economic developers to think more profoundly and confidently about their local economy.

Regional Economic Development

Forward-looking communities have attained a competitive edge by strengthening clusters of related and supporting industries, not courting individual firms. How will your community know which clusters to strengthen as it negotiates this fundamental shift in development strategy? This book shows you how to conduct local economic analysis to support such strategic planning decisions. You'll learn how to use basic economic analysis techniques to analyze changes in the local economy and evaluate the significance of these changes for economic development policy. They show how to structure an analysis; assess local economic performance; analyze the structure and dynamics of a local economy; evaluate local growth prospects; assess local human resources; evaluate nonlabor resources; and link analysis to strategic planning. *Understanding Your Economy* also includes a summary of data series and sources that will trim hours from your search for information necessary to conduct your analysis. *Understanding Your Economy* does not assume an extensive background in statistics or data management. It can serve as a stand-alone manual for anyone who wants to learn more about the functions and dynamics of an area's economy. It's also designed to serve as a text for a two-day seminar. It suggests a format for presenting the materials and includes chapter summaries of key concepts as well as a guide to supplemental resources that will help instructors develop a successful workshop. Must-reading for all planners dealing with economic development. It is also an appropriate text for undergraduate, graduate, and professional courses in economics, public policy, and urban planning.

Strategic Planning for Regional Development in the UK

This book discusses national development planning in the context of a globalized world economy. National economic development planning, the process of defining strategic economic objectives for a country and designing policies and institutional frameworks to attain them, was popular in many countries in the 1960s and 1970s. Over time it lost its appeal. More recently, with globalization accelerating and economic competition increasing, it is making a comeback in different countries under different forms. National planning in this new era is different than the earlier quantitative planning approaches. It employs different tools, such as strategic visions and action plans, revived forms of physical infrastructure planning, industrial policy, and cluster policy. Built on the research of international scholars with firsthand knowledge of the countries in question, this volume presents and evaluates current national planning strategies and policy worldwide. It will be of interest to both academicians who study and teach globalization and development as well as policy makers who may use it as a reference as they contemplate their own strategies.

A Strategic Approach to Economic Development-ebook Version

China is a powerful engine of the global economy and the country's rise is undoubtedly the outcome of its protracted campaign of designing and implementing national development strategies since the founding of the People's Republic of China in 1949. This book reviews the transformation and innovation of China's economic development strategies, especially Deng Xiaoping's Three-Step strategy and Xi Jinping's internal and external strategies. By introducing the concept of strategic paradigm, it analyzes the theoretical basis of myriads of economic development strategies and predicts China's choice. With the evolutionary process and the outstanding problems in national development planning as the main thread, it discusses the improvement of the national planning system, specifically of the national overall planning system, the regional planning system, the interplay and conflict between regional planning. It also studies the reform of city-county planning system, major function-oriented zones (MFOZs) and planning legislation and institutionalization. It also attempts to put forward proposals to coordinate the interests of planning departments and make different types of planning at different administrative levels compatible.

UNDERSTANDING YOUR ECONOMY

The book delivers an inspiring, first-hand insight into the state of urban competitiveness and how cities may make the best use of it. . . Kresl gives a well-informed insight into urban problems and related strategies, based on a carefully deployed comparative approach. Markus Hesse, *Growth and Change* This volume delves into issues overlooked in many texts about the EU and will be useful for courses in European and international studies and local government. Recommended. G.T. Potter, *Choice* Peter Kresl brings unique and invaluable empirical evidence, from the early 1990s through to 2005, to examine the relationship between urban competitiveness and economic-strategic planning for ten internationally networked cities within the EU. *Planning Cities for the Future* links the study of urban economic competitiveness with urban planning and is able to ascertain the crucial factors for success in this area of public policy. These factors include effective governance, leadership and monitoring of performance. The author also reveals how economic turbulence macro-economic stagnation, the emergence of competitors such as China and Central Europe and the introduction of the euro for example all have distinct impacts on the economic development of cities. He also suggests that today's economic strengths may create tomorrow's social pathologies, a fact which city planners must always keep in mind. Peter Kresl's book offers examples of cities that got it right and others that did not. Scholars and researchers interested in public sector economics, urban economic development and planning as well as city planners themselves will find much to interest and stimulate them in this book.

Understanding Local Economic Development

A core aim of this LED Strategic Planning and Practice Casebook is to highlight practical knowledge and approaches that can be used by municipal governments and communities to understand, design and implement integrated LED strategies. This casebook seeks to provide an understanding of municipal approaches to LED strategic planning by identifying good practice in strategic planning methodology. The casebook serves as a collection of six local economic development strategies that provide examples of good practice from across Europe and from the Cities of Change network.

Promoting local economic development through strategic planning. 1. Quick guide

This book is designed to provide an introductory understanding of challenges, goals, processes, and procedures for economic developers, particularly economic development volunteers, in rural areas and small towns. Chapter 1 defines economic development and basic terms. Chapter 2 describes major economic, social, and demographic trends that influence the development prospects of small communities and rural areas. Chapter 3 discusses 10 common denominators of success for development organizations and steps in getting started. Common problems are addressed in Chapter 4. Chapter 5 reviews the basics of site selection

and describes a 12-step process. Chapter 6 discusses in detail a strategic planning process that is composed of a cycle of eight steps. Focus of Chapter 7 is on the rationale behind targeting and on data sources and techniques to select target industries. Chapter 8 provides information on business retention, expansion, and creation programs. Chapter 9 describes a comprehensive approach to marketing as applied to economic development based on the strategic planning and targeting frameworks and an understanding of the site selection process presented in earlier chapters. Each chapter concludes with references to books, articles, and organizations that are particularly relevant to the topics covered. Twenty exhibits supplement the text, and a 107-item annotated bibliography lists relevant books, articles, government publications, and development organizations. The book is intended to be a useful reference book for local government officials, community leaders, educators, and others involved in the community economic development field. (YLB)

Now thoroughly updated for the challenges of the 21st century, and with new coverage of sustainability, the Fifth Edition explores the theories of local economic development while addressing the issues and opportunities faced by cities, towns and local entities to craft their economic destinies within the global economy.

Strategies for Cities and Counties

Regional development strategies have become the focus of attention in many countries in the 1990s. This textbook provides a conceptual, theoretical and empirical analysis of regional development strategies within a European context. It examines the various regional development strategies which are currently being pursued within the regions of Europe - defined in its loosest term to include East and West. The book describes how many different European regions are attempting to reduce regional disparities by engaging themselves in coherent and focused regional development strategies, and there is also private sector approach to regional economic development. There are many case studies from Europe and from other parts of the world, including Japan, thereby providing lessons that different countries and regions can learn from each other.

Economic Planning and Industrial Policy in the Globalizing Economy

Innovation districts are physical spaces that serve to strengthen the foundations and institutions of an innovation ecosystem. The design, implementation, and management of formalized innovation districts is a new practice area. Research draws upon the experience of concentrated areas of innovation that occurred organically, such as Boston's Route 128, as well as intentional projects to bring together innovators in large science and technology parks, such as North Carolina's Research Triangle Park. Existing research focuses on how to define and design innovation districts and evaluate their impact, as well as general policy considerations. In this paper, we review the definitions and benefits of an innovation district, reviewing the existing empirical research on their impacts. We then propose a series of questions to guide practitioners in addressing the economic, physical, social, and governance elements of an innovation district. Finally, we outline some of the challenges in creating an innovation district and ways to measure progress, to allow practitioners to get ahead of potential issues in the future. This paper is intended to help policymakers and

practitioners working in innovation and economic development translate the concepts of innovation ecosystems into actionable next steps for planning innovation districts in their communities.

Promoting Local Economic Development Through Strategic Planning: Manual

This tool kit provides a framework and tools for conducting rapid assessments to prepare city economic development plans in Asian cities. An analytical framework guides the reader through a series of steps for three analytical and assessment processes. These are designed to prepare economic profiles; evaluate future economic development options and pathways; and prepare strategies, action plans, and prioritize investment activities in support of city economic development. The steps in each process are linked to tools that assist the user in collecting and analyzing data and information for a range of studies, and they are also linked to assessment techniques used to prepare city economic development plans.

Planning Cities for the Future

This chapter has shown a small sample of GIS applications in economic development. GIS is a powerful tool for data analysis and presentation, and the economic development ramifications are truly significant. The speed at which data and strategies can be coordinated is clearly changing the way economic developers approach their job. There are a number of important trends that are likely to result in GIS becoming more pervasive in the economic development community. These include declining costs of GIS software, increased computing power, and the growth of Web-based GIS applications. There also has been increase in GIS skills among economic development professionals. References Bastian, L. (2002). Getting the best from the web. Community Economic Development Strategic Planning for Rural Communities

This book is dualistic in its nature: it seeks to combine two approaches to the analysis and assessment of societal development prospects and to strengthen the capacity of each. The book describes the strategic development of regional economies as well as worldwide trends. The theory and methodology of strategy should extend much further and deeper than what is obvious to everyone. Strategy is aimed at the effective movement of the object of strategizing to the reality that does not exist and will only begin to form within a certain period of time, which is determined by long-term prospects. One approach has at its core managing the information and technological development of society—its social and economic transformation—through developing and implementing a particular strategy with a concept or doctrine of the planned guidelines as its first stage. Strategizing the information-technological transformation of society is proved to be most effective when it covers long-term development periods, which will lead to significant and even fundamental changes in the values and priorities of socio-economic development. Another approach described in this volume, which is implemented in conjunction with strategizing, is connected to the conceptual understanding of long-

term development. The concept of noonomy represents a complex theory of transformation based on technological change and the resulting shifts in social organization. It demonstrates not only trends but also qualitative social shifts to which these transformations lead. In this way, the approach put forward in the theory of noonomy makes it possible to anticipate and evaluate distant horizons of social development and to grasp the transitions from one stage to the next. Employing the concept of noonomy in the processes of strategy is a prognostic phase, immediately preceding the processes of strategy and creating a reference point for them. This book represents the unique strategy concepts (V. L. Kvint) and noonomy (S. D. Bodrunov) have been brought together. The idea of uniting the authors' views on the problems of civilizational development has a common scientific platform: the definition of long-term goals and the choice of economic and strategic tools to achieve them. This book summarizes the authors' main approaches to the issues at hand to facilitate the applied problem set by the authors, which is to demonstrate the productivity of synthesizing these approaches to the study of societal development patterns for subsequent use in their theoretical and practical implementation.

Strategic Planning in Business and Government

Academic Paper from the year 2019 in the subject Business economics - Business Ethics, Corporate Ethics, grade: 2.1, University of Washington (Economics), course: Economics, language: English, abstract: This paper presents impacts of business policies on economic growth and gives advices for creating a strategic plan. A strategic plan is used to set business priorities, inform the decisions, and guide the business operations of various organizations. The strategic plan ensures that every member of an organization plays their role in the achievement of a common goal that effectively accommodates the changes in both internal and external business environments. It's also used as a communication tool to inform all the stakeholders of the business objectives and the action plan for achieving those objectives. To develop an effective business plan, it's important that all aspects of internal and external business environment are taken into consideration. This is due to the fact that these factors such as inflation, interest rate, the Gross Domestic Product, and trade balance significantly affect the ability of the organization to attain its set objectives according to the business plan. Monetary policies are used by the government to regulate the value of a country's currency such that it remains stable at all times. The monetary policy is also concerned with a reduction in the rate of unemployment which significantly affects a country Gross Domestic Product. Therefore, a country that wishes to achieve economic milestones should be in a position to change its monetary policies so as to control important factors such as the rate of inflation. Changing these policies gives the country full control over various nominal variables such as the exchange rate and money supply so as to increase the rate of economic growth especially with regard to imports and exports. As a result, the monetary policies set by a country have consequences on the economic growth of that country.

Strategic Planning for Local Government, second edition, outlines the strategic planning process in local government and helps local government leaders anticipate and shape the future of their communities. It covers practical ways of obtaining information, analyzing that information, and developing a vision for the community that can be translated into programs and line items in a budget. This e-book offers many excerpts from local government plans and working documents that serve as examples you can build upon. These models can be customized for your local government. Videos highlight the role professional local government managers play in building communities we're proud to call home.

Economic Development for Small Communities and Rural Areas

This book aims to support the design and delivery of more effective local and regional economic development strategies. A crucial part of this process is the collection and use of evidence, on local needs and options and on what works and what does not. Each important step in the process of designing an effective evidence-based strategy is explained and examined, with a particular focus on the work that should be done

in advance of implementation, before resources are spent. Information is provided on defining objectives, identifying options, assessing expected impacts, using assessment results, implementing strategies and developing information systems. The main principles and techniques, as well as typical problems and how to overcome them, are discussed. Through this book, the reader will learn how to create and put into place successful evidence-based strategies that will increase economic impacts and enhance the programme-management process.
