The Long Distance Cyclists' Handbook

The new BikeFit manual \"When the Foot Meets the Pedal\" is the foundation for every good bicycle fit. From Max Testa, MD: Over 30 years ago during my Sports Medicine Fellowship, I was told that you cannot assess a cyclist's performance or injury without looking at the bike fit. Since then, I have rarely evaluated a cyclist in clinic without checking her/his position on the bike. With practice, I also learned that the foot-pedal interface is a key factor for a successful bike fit. With their new book \"When the Foot Meets the Pedal,\" established bike fit experts Paul Swift and Dr. Katrina Vogel have completed another step in their effort to educate on the applied science of bike fitting. This easy-to-read, well-illustrated book condenses a lot of information about the proper assessment of the cleat's positioning and alignment. The readers, from bike fit professionals to the more serious cyclists, will find a lot of valuable and practical information, supported by great illustrations that take them step-by-step from the basics to the advanced understanding of the topic. I strongly recommend the reading of this book. It will be a fun and productive experience.\" Max Testa, M.D. Intermountain LiveWell & Sport Performance Ctr, Salt Lake City, UT Chief Medical Official, BMC Racing professional cycling team, USA

It was the biggest cycling team ever seen in Britain, supported by one of the world's most famous names. They took on the old school Europeans in their own backyard, pushing a huge wave of support and excitement before them as they shook the foundations of one of the world's most traditional sports. Then, on the brink of greatness, the house of cards folded. Now, for the first time, the full inside story of the Linda McCartney Pro Cycling Team is told. This is the story of how the most famous vegetarian in the world came to sponsor the world's only vegetarian professional sporting team. Hear about how a small-time British outfit grew so quickly they elbowed their way into the Tour of Italy, and then delve into the mystery of how a team personally funded and endorsed by one of the world's richest men could dissolve into thin air virtually overnight, millions in the red.

To understand what we know and be aware of what is to be known has become the central focus in the treatment of engineering data handling issues. It has been some time since we began treating issues arising from engineering data handling in a low key fashion because of its housekeeping chores and data maintenance aspects representing nonglamorous issues related to automation. Since the advent of CAD/CAM, large numbers of data bases have been generated through stand alone CAD systems and the rate of this automated means of generating data is rapidly increasing. This possibly is the key factor in changing our way of looking at engineering data related problems. This volume contains some of the papers, including revisions, which were presented at the fourth Automation Technology conference held in Monterey, California. This volume represents ATI's efforts to bring forth some of the important case studies related to engineering data handling from the user's point of view. Because of its potential enormous impact on management and productivity advancement, careful documentation and coordination for outstanding contributions to this area are of utmost importance. This volume may serve as a precursor to additional volumes in the area of engineering data handling and CAD/CAM related user studies. Anyone with comments or suggestions, as well as potential contributors, to this series, is encouraged to contact the editorial board of ATI.
